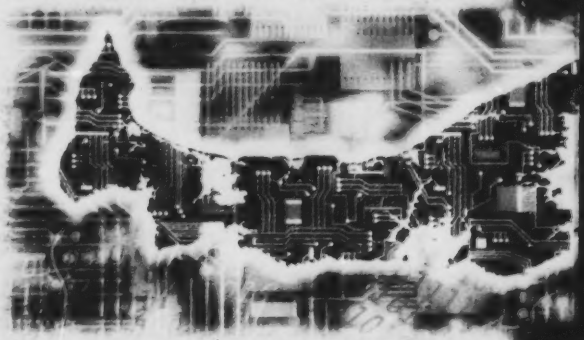
Prince Edward Island

Land Cradled on the Waves

Prince Edward Island is situated in the Gulf of St. Lawrence on the east coast of Canada. With a total area of 5,656 square kilometres, the province is home to approximately 137,000 citizens, but plays host to more than one million visitors each summer.

The Confederation Bridge between Prince Edward Island and New Brunswick is the longest bridge over ice-covered water in the world. Opened in 1997, the 12.9 kilometre structure facilitates easy access to North American markets for Island goods and services. International exports from Prince Edward Island have increased 54 percent since 1996 (1998 figures).



Prince Edward Island has built Canada's first province-wide, ATM-based broadband network. Stretching from one end of the Island to the other, and joined by fibre optics to the mainland, it offers business the ideal development environment for networked applications at the *lowest rates* available anywhere.

A 1999 study by the Fraser Institute in British Columbia ranked Prince Edward Island as the province with one of the lowest rates of taxation collected across all three levels of government in terms of percentage of income, for each of the past three years. Corporate taxation for manufacturers is the second lowest in the country at 7.5 percent.

In 1999, the Prince Edward Island labour force stood at 71,600. This represents a participation rate of 66.4 percent – the highest in Atlantic Canada. Islanders are loyal employees with 43 percent working for the same employer for more than six years.

Islanders also value education, with 83 percent of high school graduates pursuing a post secondary education. Prince Edward Island has two post-secondary institutions: the University of Prince Edward Island (UPEI) and Holland College. UPEI is the site of the Atlantic Veterinary College and the PEI Food Technology Centre. Holland College is the provincial technical and trade school incorporating regional institutions such as the Atlantic Tourism and Hospitality Institute and the Atlantic Police Academy.

Technology and Environment

Prince Edward Island Environment Industry Network

Assistance was also provided for this directory by the Atlantic Canada Opportunities Agency, Industry Canada and Prince Edward Island Business Development.

102-04584/

On behalf of the Government of Prince Edward Island, I applaud the publication of the first ever Prince Edward Island Environment Industry Directory. The resourcefulness of Islanders is already well known in many sectors of the global economy. Now, the environmental ingenuity of Prince Edward Island is being given a distinct profile with this book.

Recent studies have shown the environment industry as contributing $32.4 million to the economy of Prince Edward Island and this is growing. Island-based firms are proving that with the use of technology such as the Internet, Island firms can compete in the global marketplace.

Islanders value their clean environment and possess a unique appreciation for their quality of life. These characteristics will become clear as you read through the varied services contained in this directory. On this important occasion, I invite you to investigate how Islanders can assist you in protecting the environment, our most precious resource.

Pat Binns, *Premier*
Prince Edward Island

In Prince Edward Island many companies are engaged in providing environmental solutions and innovations to protect the environment and remediate existing problems. This, the first Prince Edward Island Environment Industry Directory, offers these same talents, services, products, technologies and environmental innovations to the rest of the world.

The depth of experience and level of expertise detailed in the company profiles clearly place Island companies in an excellent position to contribute to the expanding area of opportunity within the environment industry sector.

Kevin J. MacAdam, *Minister*
Fisheries, Aquaculture and Environment

Traditionally, environmental products and services have been directed at satisfying legal requirements, providing solutions to environmental problems and adding value to other products. This is now expanding to include solutions that also decrease material inputs, reduce energy consumption, recover valuable by-products, and reduce emissions or minimize waste-disposal problems. Environment industries in Prince Edward Island are rising to these challenges and are providing environmental solutions, not just for the domestic market, but for the world.

It is forecast by the Organization for Economic Cooperation and Development (OECD) that by 2010 the global market for environmental products and services will reach $600 billion (US). The Prince Edward Island Environment Industry Network is confident Island companies will be at the forefront providing the solutions that will translate into both economic and environmental prosperity.

Don MacCallum, *President*
Prince Edward Island Environment Industry Network

Office Locations: Charlottetown, Prince Edward Island

Markets: National, Africa, Asia, South America, Europe, Australia, North America

Atlantic Fish Health – A Division of AVC Inc. was established in 1994 and employs eight persons.

The company conducts research studies aimed at enhancing the health of aquatic organisms and at protecting the aquatic environment.

AFH is involved in two areas of research. AFH has been conducting fish health contract research for pharmaceutical, fish feed and vaccine companies to GLP standards for the past eight years. Primary studies include in vitro and in vivo efficacy, pharmacokinetics (single dose in vivo or oral), target animal safety, "hot" metabolism and total residue depletion, "cold" marker residue method development. AFH can also assist with chemical analysis of compounds.

Strategic work studies include developing guidelines and procedures to accurately test vaccines. Strategic research initiatives are being developed in several areas including targeted drug delivery, immune based therapy, enhanced drug absorption, mechanisms for growth enhancement, fish as experimental models and new pathogen challenge systems.

AFH operates in close association with the Atlantic Veterinary College, UPEI and has access to a number of services including a diagnostic lab. AFH includes a team of professionals with an in depth knowledge of fish pathology, microbiology, parasitology, toxicology, epimediology and other sciences that can help diagnose and monitor ecosystems or other environmental concerns.

Atlantic Veterinary College (AVC Inc.)

550 University Avenue
Charlottetown

Contact: Randy Angus

Office Locations: Cardigan, Prince Edward Island

Markets: Provincial

The Cardigan Fish Hatchery is operated by AVC Inc., the technology transfer arm of the University of Prince Edward Island. The facility rears high-quality Atlantic Salmon, Speckled Trout, Rainbow Trout, Arctic Char and Striped Bass in support of public fisheries, salmonid enhancement research and aquaculture development. The site is ideal for aquaculture research and development because of its high-yielding aquifer, excellent surface water quality, and its proximity to the University of Prince Edward Island and the Atlantic Veterinary College.

The hatchery provides facilities for pilot testings and scale-up research as well as a venue for education, training, equipment demonstrations and technology transfer to the private sector. Tours are conducted to demonstrate aquaculture techniques to industry, government and academic communities, as well as to the general public.

Diversified Metal Engineering Ltd.

Office Locations: Rollo Bay West, Prince Edward Island

Markets: National, International

OvaTech is a consortium of several independent, certified disease-free salmonid producers located in Prince Edward Island. Each partner specializes in culturing Atlantic Salmon, Arctic Char and Rainbow Trout brood stock.

Eyed eggs of the three species offered for sale by OvaTech are derived from brood stock held in fresh groundwater (spring or deep wells) throughout their entire life span. The main brood stock holding unit and incubation facility has maintained Canadian Fish Health Certification for 20 years.

OvaTech has gained considerable experience over the last several years in the export of ova internationally and is knowledgeable of the packaging and transport requirements to ensure receipt of viable product. The company can also assist clients, identify brokers or comply with government import requirements. A copy of OvaTech's Federal Government Fish Health Certificate is available upon request.

A sample of eggs from each production lot is retained at OvaTech where hatching success is monitored. The technical staff at OvaTech is also available to assist clients develop optimum conditions for the subsequent incubation of eggs from all three species.

A recently completed egg incubation facility has the latest technology designed to prevent the occurrence or transmission of disease.

OvaTech has developed an up-welling incubation system which eliminates the need for the use of chemicals in the treatment of fungus. With these advancements in place, OvaTech offers added protection to the environment as well as offering clients chemical-free eggs.

BIOTECHNOLOGY

Abiogen Environmental Services

Marshfield Manse
Charlottetown RR 3
Prince Edward Island
C1A 7J7

Tel: (902) 566-4078
E-mail: abiogen@isn.net
Web site: www.cycor.ca/philipm/abiogen

Contact: Paul S. Stewart

Office Locations: Charlottetown, Prince Edward Island

Markets: Nationally, Europe, Australia

Abiogen carries on in-house research into environment and primary resource and development issues. The company continues to import or develop new, inexpensive methods, as well as new biochemical and biotechnology tools, which are applicable to challenges facing primary resource industries. The company provides agro-food consulting and biochemistry services for the primary production sectors: agriculture, fisheries, forestry and environment. In a private laboratory facility and office in Marshfield, and at the field site and greenhouses in Valleyfield, the following services are offered or being developed:

- a screening service of water quality analysis for homeowners, aquaculturalists and farmers
- farm and forestry waste uses (e.g. protection of oyster and shiitake mushrooms)
- development of educational and hobby kits for plant tissue culture and water quality testing
- micro propagation of culinary herbs for hobbyists, farmers and greenhouses
- immuno-therapy for cultured finfish and lobster
- development of antibodies against disease
- bottom and tray growout of cultured oyster spat on experimental lease
- literature search, proposal and report preparation, and consulting services

Web site: www.gov.pe.ca/ftc/

Contact: Richard Ablett

Office Locations: Charlottetown, Prince Edward Island

Markets: Provincial, National, U.K., Cuba, Bahamas

The centre is an ISO 9001 registered company, providing quality services to its clients. It began in 1987 on the campus of the University of Prince Edward Island with the goal of providing both scientific and technical expertise to the agri-food industry.

Equipped with state-of-the-art laboratories and pilot plant, the 15,000 square-foot facility employs approximately 30 food scientists, technicians and support staff. The following services are offered to clients:

- product development
- pilot plant
- sensory analysis
- nutrition labels
- HACCP services and quality management programs
- analytical services
- research and development
- technology transfer
- strategic alliances

CONSERVATION

Avalon House

Tools for Renaissance Living

Fax: (902) 659-2790
E-mail: consulting@avalonhouse.pe.ca
Web site: www.avalonhouse.pe.ca

Contact: Kevin Jeffery

Office Locations: Belfast, Prince Edward Island

Avalon House offers professional consulting and design services to address a wide range of sustainable living issues and concerns. These services are geared for individuals, communities, private businesses and government agencies. Topics of expertise include:

- innovative shelter
- renewable power
- sustainable farming and land use
- environmental protection
- home-based education and livelihood

Consulting and design services are available on an hourly or project basis.

Avalon House offers educational opportunities for small groups. Workshop topics include:

- creating your own affordable advanced house
- designing and installing renewable electrical power systems
- sustainable farming and land use
- creating your own family renaissance

Avalon House also offers a wide range of books on sustainable living issues.

Bedeque Bay Environmental Management Association (BBEMA)

Contact: Brenda Penak

Office Locations: Summerside, Prince Edward Island

Markets: Bedeque Bay watershed with educational implications Island-wide.

Bedeque Bay Environmental Management Association was established in 1992 and has one full-time executive director with a varying number of contractual and seasonal staff and volunteers. The scope involves a community-based ecosystem initiative that focuses on sustainable development, integrating economic growth and environmental conservation.

BBEMA has a 12-member board of directors.

Work activities consist of:

- community sustainable development
- public information and education
- environmental conservation and enhancement
- remedial assessment and action
- biological monitoring
- research
- agro-environmental demonstration site and tours

Crops and Livestock Research Center

Agriculture & Agri-Food Canada, Research Branch

440 University Avenue
PO Box 1210
Charlottetown
Prince Edward Island
C1A 7M8

Tel: (902) 566-6816
Fax: (902) 566-6821
E-mail: deslauriersc@em.agr.ca
Web site: res.agr.ca/charlotte

Contact: Christiane Deslauriers

Office Locations: Charlottetown, Prince Edward Island

Markets: National, International

The Crops and Livestock Research Center has expertise in conducting research for the agriculture and related industries on potato management and feed crops, specifically in cereal and forage crops; management, protection and nutrition of potatoes; soil management and conservation; and feeding and nutrition of swine and beef animals. The center serves as the national center of excellence for sustainable potato production systems.

The Research Center develops improved technologies for crop production that reduces use of chemical pesticides and fertilizers; reduces soil erosion in potato production; makes better use of on-farm or municipal waste by conversion to usable composts for crop production; and develops improved soil management technologies to conserve the soil resource.

Projects undertaken:

- crop management of potatoes and feed crops
- pest management in cropping systems
- development of cereal and clover varieties
- soil erosion control in agricultural systems
- conservation tillage and soil quality
- crop residue management in cropping systems
- management of nitrate in agricultural soils
- composting of agricultural and industry wastes
- beef cattle and swine nutrition

The Research Center operates with a total budget of $5.6 million and has approximately $0.5 million additional in Matching Investment Initiative (MII) projects, with 85 full-time staff, including 21 researchers. The center's laboratory building at the Home Farm also houses staff of the Agriculture Division of the PEI Department of Agriculture and Forestry; the Atlantic regional and PEI district offices of Agriculture and Agri-Food Canada's Market and Industry Services Branch. The center operates two other properties on PEI: Upton Farm, where forage research is located; and Harrington Farm, which accommodates about 70 percent of the center's field studies in cereals, potatoes, and soil tillage and conservation. The three locations have a total land base of 383 hectares.

The center also operates the Nappan Research Farm in Nova Scotia. Beef research is conducted at Nappan where researchers are developing technologies for sustainable food production from beef cattle, integrating land and soil management, forages and animal resources. The Nappan Farm operates with a total budget of $0.76 million and has approximately $0.25 million in MII projects.

Ducks Unlimited

#64 Highway 6
PO Box 430
Amherst
Nova Scotia
B4H 3Z5

Office Locations: Amherst, Nova Scotia

For more than 25 years on Prince Edward Island, Ducks Unlimited Canada (DU) has been conserving wetland and upland habitat for North America's waterfowl, other wildlife and people. Working in cooperation with landowners, DU provides varying levels of expertise, manpower and financial contributions toward these projects. DU has conserved over 3,509 hectares (8,672 acres) of wetland and associated upland habitat on Prince Edward Island.

Fortune Bay Ecolodge Designs Ltd.

Fortune RR 2
Souris
Prince Edward Island
C0B 2A0

Tel: (902) 892-9578/687-2662
Fax: (902) 687-2322
E-mail: ibs-pei@yahoo.com

Contact: Phil Ferraro, Nancy Willis

Office Locations: Charlottetown and Fortune, Prince Edward Island

Markets: National, United States, International

The company was established in 1992.

Fortune Bay Ecolodge Designs Ltd. (FBED) is dedicated to the development of eco-tourist facilities. FBED offers eco-tourism training seminars and environmental design services for existing and planned accommodations so that they can cater to the eco-tourism market. Their seminars provide intimate details of what tourists want, and how their clients can offer the experience the visitors are seeking. The lodges they design are intended to be comfortable and exciting living classrooms that enhance each visitor's knowledge of and appreciation for the surrounding environment, and encourage an active role in ecosystem protection. FBED also offers consulting services for the design, development and maintenance of parks and interpretive trails.

Island Nature Trust

PO Box 265
Charlottetown
Prince Edward Island
C1A 7K4

Tel: (902) 892-7513
Fax: (902) 628-6331
E-mail: intrust@isn.net
Web site: www.island.com/nature/trust.htm

Contact: Kate MacQuarrie

Office Locations: Charlottetown, Prince Edward Island

Island Nature Trust is a conservation group with involvement in:

- environmental preservation studies
- remedial assessments
- public information

Island Nature Trust is a non-governmental organization dedicated to habitat and wildlife conservation on PEI. This is accomplished through land acquisition (purchase, lease, donation) and negotiating legal conservation agreements with private landowners. As of December 31, 1999, the trust had acquired 2,300 acres of dune, wetland, offshore island, forest and other natural areas across PEI; an additional 2,000 acres has been voluntarily protected by private landowners. Island Nature Trust also conducts research, public education, habitat restoration and endangered species protection projects.

The MacPhail Woods Ecological Forestry Project

Atlantic Wind Test Site Incorporated was established in 1981 as a wind power testing company.

AWTS has been designed to perform a range of technical and scientific services for the wind energy industry.

Among these are:

- testing for commercial and prototype wind energy systems to determine operational characteristics, safety and reliability
- development of collaborative projects, with industry, utilities and government, especially for Arctic and remote locations
- wind resource monitoring and consulting
- participation in the development of national and international standards for performance testing, safety and electrical interconnections
- development and testing of wind – diesel and other wind-energy technology research and development
- education and supply of information on wind-energy technology to the public

Office Locations: Charlottetown, Prince Edward Island

Markets: National

Trigen-PEI purchased the Energy From Waste Plant and two small district heating systems from the Provincial Government in 1995. Trigen incinerates, with heat recovery, 30,000 tonnes per year of municipal solid waste. The heating plant also utilizes sawmill waste for energy production.

The company heats and cools multiple buildings using half or less of the fuel normally required. Steam is sent to a nearby 300 bed hospital for heating and cooling and by means of a 15 kilometre hot-water, district-heating system, thermal energy is transferred to service a university campus, government buildings, shopping centres and other commercial buildings. Since 1995 the company has made major capital investments in expansion and pollution control equipment.

Trigen has a work force of 37 people.

Try-Way Energy Systems Ltd.

Research, invention, design and project management describe the day-to-day work of professional engineers. Professional engineers are guardians of public safety, licensed to protect the public. The licence is the sign of a professional trained to ensure that buildings, roads, machines, products and environment are safe.

The typical services provided by an engineer are:

- land development
- building design and construction
- processing and manufacturing
- regulatory approvals

The association administers the *Engineering Profession Act*. All persons registered as members under the provision of the act constitute the body of the association whose objectives are:

- the regulation of the practice of engineering and the governing of the profession in accordance with the *Engineering Profession Act* and its by-laws and Code of Ethics;
- the promotion and improvement of the proficiency of professional engineers in all matters relating to the practice of engineering;
- the development of public confidence in the proficiency and competency of professional engineers in the practice of engineering;
- the development, establishment and maintenance of professional ethics for the profession; and
- the promotion of public awareness of the role of the association.

Jacques Whitford employs 12 people on Prince Edward Island. The experience and technical expertise within the company has provided a comprehensive package for "life of project" environmental management requirements for a wide variety of projects in PEI. With their knowledge of applicable legislation, guidelines, standards and codes of practice, JWEL streamlines the environmental management requirements of projects and liases with regulatory agencies to assist clients in obtaining requisite approvals as quickly and as effectively as possible. With JWEL's comprehensive technical capabilities, the company can provide information and provisions needed for site selection and design criteria to help clients secure authorizations required. The company can also identify necessary mitigative measures and provide environmental monitoring to ensure compliance with regulatory requirements. By incorporating the life of project environmental management strategy, their clients reduce their overall project costs by avoiding unnecessary delays in the permitting process and reducing the risk of potentially significant fines and/or delays caused by failing to meet regulatory environmental protection requirements. JWEL provides technical field expertise for marine and terrestrial surveys through the use of techniques such as scuba diving (including underwater video), water and sediment sampling, air quality monitoring, vegetation and avifaunal surveys, and many more. The company has extensive experience with environmental management in PEI.

The company has successfully conducted environmental impact assessments, effects monitoring, protection plans, audits/site inspections, permitting, hydrographic modeling, oceanographic studies and public consultations for projects in PEI such as:

- Confederation Bridge project (including ocean disposal permits and dredge monitoring and disposal program)
- Hillsborough Bridge expansion
- Vernon Bridge improvement project
- Summerside west end development project
- Crowbush Resort Development
- Greenwich multipurpose interpretive centre
- Souris Ferry wharf dredging and upgrade
- Charlottetown and Summerside Harbour dredging and disposal
- Charlottetown waterfront arterial highway
- Environmental site assessments for the marine ports of Souris, Georgetown, Charlottetown and Summerside
- Small Fry Snack Foods Inc. (including wastewater treatment plant monitoring)
- Slemon Park sewage treatment plant
- Brudenell sewage treatment system upgrade
- Charlottetown Naval Reserve
- Souris Food Park
- National Park avifaunal survey
- Cavendish Farms
- PWGSC Office – building indoor air quality

Office Locations: Charlottetown, Prince Edward Island

Markets: National

Charlottetown Metal Products' primary function is the manufacture of equipment for the food processing industry. The company is also a manufacturer of culverts for storm sewer and wastewater distribution.

Curran & Briggs Limited

40 All Weather Drive
PO Box 1625
Summerside
Prince Edward Island
C1N 2V5

Tel: (902) 436-2163
Fax: (902) 436-1528

Contact: Brian Profitt

Office Locations: Summerside, Prince Edward Island

Markets: Provincial

Curran & Briggs Limited is involved in the heavy construction industry including road construction, asphalt pavement, concrete supply and the construction of water and sanitary services. Waste concrete and asphalt accumulated is often used as a fill product. For the past 12 to 15 years, Curran & Briggs Limited has stockpiled these products and then crushed the material, manufacturing the material into a resaleable gravel product.

The materials accepted at the company's yard in Summerside include the following:

- concrete waste
- concrete sidewalk
- concrete block
- broken concrete foundations
- broken asphalt and gravels

This material is accepted during normal business hours and must be free from debris which would normally be sent to a landfill site.

Curran & Briggs Limited was a general contractor for the East Prince Waste Management Facility at Wellington Centre, Prince Edward Island.

Dwight Parkman

PO Box 25
Hunter River

The Island Waste Management Corporation is a provincial crown corporation that administers provincial waste management issues. The corporation is also responsible for Waste Watch, a source separation waste management system which was implemented in 1994 in approximately 10,000 households, 1,000 businesses and 1,000 seasonal residences in the east Prince County area of Prince Edward Island (approximately 25 percent of PEI's population.) Under Waste Watch, waste is sorted into recyclables, compostables and remaining waste materials. A landfill diversion of 65.1 percent was obtained in 1998.

Mahemigew Inc.

PO Box 142
Lennox Island
Prince Edward Island
C0B 1P0

Tel: (902) 831-2303
Fax: (902) 831-3302
E-mail: mahemigew@auracom.com
Web: www.auracom.com/~mahemige/

Contact: Don Bernard

Office Locations: Lennox Island, Prince Edward Island

Markets: Provincial, Eastern United States, Japan

Band owned Mahemigew (pronounced MAH-MI-GOO), a Micmac word meaning "taken from the earth" packages and sells peat moss sourced from its own bogs.

Mahemigew Inc. was established in 1980 and employs 25 persons. Company activities consist of the harvesting, packaging and marketing of peat moss and compost mix.

Mahemigew Inc. is also developing an organic peat moss and compost gardening mix. The new product will have all the components that gardens are demanding for the healthy preparation of soil. The materials used to make the compost include fish, fruit, potatoes and vegetables from local processing plants. With frequent turning of the piles, the biodegradable matter will transform itself into a high-grade odorless fertilizer. The compost material is monitored to insure proper nutrient levels are maintained. The mix is packaged in a variety of sizes for provincial, national and international markets in Japan and the eastern seaboard of the United States. The process is environmentally friendly and utilizes a valuable waste resource.

E-mail: *sferris@simscape.com*

Gaylene Willis – Marketing & Communications Associate
E-mail: *gjwillis@simscape.com*

Office Locations: Charlottetown, Prince Edward Island

Simscape provides precisely tailored software and multimedia solutions through strategic responsive relationships. The company has specialized in the creation of financial management software for utilities, engineering design-aid tools and is expanding into multimedia software development for business training and education. Simscape works with clients to create solutions that realize their needs by automating, standardizing and visually enhancing their development and management processes.

RATES – is a Windows™ based revenue management program that calculates, allocates and designs water and/or wastewater rates for all customer classes. RATES provides utilities with the power to accurately calculate rates, to vary assumptions, and to conduct "what if" analyses in support of their rate study. RATES is able to perform several functions. These include: forecasting demand by customer classes, forecasting maintenance and operating expenses, calculating a utility's revenue requirements, and allocating costs to customer classes. The program also generates up to 24 reports that can be printed and used to support a rate case filing.

CONSERVE – is a conservation planning program that forecasts financial and demand impacts of price and non-price conservation strategies. CONSERVE is a demand site management program that provides an effective method for evaluating and controlling the revenue and cash flow effects of conservation for water and electric utilities. CONSERVE evaluates the data on a utility's operations, revenue, expenses, and the elasticity or impact of a conservation strategy.

ASBESTOS ABATEMENT AND REMOVAL

Asbestos is a commercial name referring to a family of minerals which occur naturally in the environment. All asbestos minerals are composed of fibres. Since the early 1900s, asbestos was mined and used in industry and construction because of its valuable strength, durability and fire retarding properties. In the 1970s, airborne asbestos fibres were targeted as a health risk and consequently, asbestos use was markedly scaled back. In recent decades, efforts have been made to establish safe asbestos removal guidelines. Prince Edward Island's Occupational Health and Safety Act (Part 49) provides regulations for dealing with PEI's asbestos remediation. The regulations demand that all asbestos be double bagged. All contractors must be licensed to remove asbestos and disposal permits are issued by provincial environment officials.

AUTO SALVAGE

Derelict and scrap vehicles can be a serious blight on the Island's landscape. An estimated eight to 12 percent of the 85,721 registered vehicles are withdrawn from Island roads annually. There are 33 licenced automobile junk yards in the province who process these vehicles to remove reusable parts for sale to customers. There are also a number of these auto salvage operators who provide a free collection service for derelict or scrap vehicles.

BOTTLE & SCRAP METAL DEPOTS

Prince Edward Island is proud of its deposit/refund system. Prince Edward Island has the highest return rates in all of Canada for soft drink containers (98 percent), beer (95 percent), and liquor/wine (60 percent). Provincial legislation demands all carbonated flavoured beverages be sold in refillable containers. This has created employment opportunities for local bottle depot operators, while keeping the Island virtually free of discarded beverage container litter.

PETROLEUM TECHNOLOGIES AND SERVICES

Prince Edward Island's reliance on groundwater means any spill of petroleum product is a potentially serious event. In 1999, there were 372 recorded spills of petroleum product in the province – 208 of these were from domestic home heat tanks. The remaining 44 percent originated from other sources including accidents and underground leaks. In the early 1990s, Prince Edward Island initiated a very successful program for the location and removal of abandoned underground fuel storage tanks. 2,200 of these were subsequently removed for proper disposal. Due to this activity, we have a number of experienced and qualified companies in the province. Contractors are licensed by the province for this remediation work. They are certified at either Level One (which permits them only to remove a tank) or Level Two (which permits them to both remove and install tanks).

SEPTIC SERVICES

Almost half of all residents in Prince Edward Island use on site sewage disposal systems to discard wastewater from their homes. Approximately 45 percent of all water used by the typical Island family is flushed from their homes. Therefore, it is recommended that these septic systems be cleaned regularly, usually every three to five years. All septic tank cleaners must be licensed by the Province and abide by legislation as outlined in the provincial Environmental Protection Act. Septic service providers in Prince Edward Island may be installers, cleaners or both. Contact individual companies to determine which service they provide.

WELL DRILLERS

Prince Edward Island is unique in Canada in that it is the only province which relies solely upon groundwater for its water supply. Groundwater soaks into the tiny spaces and cracks in the soil and bedrock as it would in an immense sponge. This saturated soil and bedrock sponge is called an aquifer. Wells can be drilled down into these aquifers almost anywhere in Prince Edward Island. Almost 40 percent of Islanders have their water supplied by on-site private wells. The average Island household uses between 1,140 and 1,820 litres of water daily. This makes Prince Edward Islanders among the greatest consumers of water in all of Canada. Well driller specialists must be licensed with the Province. Regulations also exist regarding well construction, abandonment and the sharing of groundwater.

You can help us

The listings in this directory were compiled by an industry survey and a review of existing directories, databases and listings. While every effort was made to include as many companies as possible and to verify the listings prior to publication, there may have been omissions. Please use the form below to provide updates or new additions for the next issue of the directory. Return the form to the PEI Department of Fisheries, Aquaculture and Environment, PO Box 2000, Charlottetown, Prince Edward Island C1A 7N8.

Prince Edward Island
It's the Natural Environment for Your Business
Prince Edward Island is the right choice with:
• A "clean and green" environment that enhances the image of your business
• Existing cluster of diversified environmental companies that provide services to your business
• Charlottetown, Prince Edward Island, third lowest cost city (out of 64 studied) in which to operate a business according to KPMG's annual report
• Achievement of 65 per cent reduction in waste to landfill sites with the provincial waste management program
• The Atlantic Wind Test Site used for the testing of prototype and commercial wind turbines and related technology
• Financial incentives available based on sound investment principles
• A responsive and accessible public sector to assist your business growth
There is a natural opportunity in Prince Edward Island. Contact us today!
